

Resume Screening Report

Role: Senior Machine Learning Engineer | May 11, 2026

Candidate Rankings

#	Name	Score	Decision	Key Strength	Key Weakness
1	Priya Sharma	9.5/10	Strong Yes	Exceptional deep learning, NLP, and LLM expertise with a strong research background.	Explicit experience years (4.8) are slightly below the 5+ year requirement, though the summary claims 6+ years.
2	Rahul Kumar	8.8/10	Strong Yes	Extensive experience (7+ years) exceeding job requirements.	Lacks specific experience with PyTorch, FastAPI, and Flask.
3	JAMES CHEN	4.4/10	No	Strong general software engineering skills; Extensive cloud architecture experience (AWS, Docker, Kubernetes).	Lacks core Machine Learning specific skills (PyTorch, TensorFlow, NLP, MLOps tools, LLMs); No direct experience in ML model development, training, or optimization.

#1 — Priya Sharma (9.5/10)

Skills Match: 8.0 | Experience Relevance: 8.5 | Education Certs: 10.0 | Project Relevance: 10.0 | Communication Quality: 9.5

Strengths: Exceptional deep learning, NLP, and LLM expertise with a strong research background.; Proven track record in designing, building, and deploying scalable ML models to production.; Extensive MLOps experience including Docker, Kubernetes, DVC, and CI/CD pipeline establishment.

Weaknesses: Explicit experience years (4.8) are slightly below the 5+ year requirement, though the summary claims 6+ years.; Some specific required tools like NumPy, Pandas, FastAPI, Flask, GCP, MLflow, Kubeflow, RAG pipelines, vector databases, and real-time streaming are not explicitly mentioned, though overall skill set suggests capability.

#2 — Rahul Kumar (8.8/10)

Skills Match: 6.5 | Experience Relevance: 9.0 | Education Certs: 8.5 | Project Relevance: 9.5 | Communication Quality: 9.0

Strengths: Extensive experience (7+ years) exceeding job requirements.; Strong track record in designing, building, and deploying scalable ML pipelines with quantified impact.; Proficiency in core ML libraries (TensorFlow, scikit-learn) and major cloud platforms (AWS, GCP).

Weaknesses: Lacks specific experience with PyTorch, FastAPI, and Flask.; Missing explicit experience with advanced NLP/transformer models (BERT, GPT, fine-tuning).; No experience with LLMs, RAG pipelines, or vector databases (preferred skills).

#3 — JAMES CHEN (4.4/10)

Skills Match: 2.0 | Experience Relevance: 3.0 | Education Certs: 7.0 | Project Relevance: 3.0 | Communication Quality: 9.0

Strengths: Strong general software engineering skills; Extensive cloud architecture experience (AWS, Docker, Kubernetes); Proven ability to build scalable systems and microservices

Weaknesses: Lacks core Machine Learning specific skills (PyTorch, TensorFlow, NLP, MLOps tools, LLMs); No direct experience in ML model development, training, or optimization; Experience is primarily in full-stack web development rather than AI/ML domain
